1 Part I

1.1 Working policy.

- *How will you make decisions? How will you distribute tasks? How will you handle disagreements or conflicts?*

Big strategic decisions will be discussed as a group at the weekly Friday meeting. Among the group, there will be a team leader who makes the final decision. This will be implemented to handle conflicts and/or disagreements.

The distribution of tasks will be decided based on individual interests and learning impact, and discussions among the group. Once a team member has been distributed a task, they will have autonomy over its execution. In case of large personal conflicts, the group will schedule an extraordinary team meeting to settle the dispute.

If the group faces a strategic decision and the team leader disagrees with the rest of the team, the matter will first be discussed collectively. If no resolution is reached within 60 minutes, the final decision will be made by majority vote.

1.2 Meeting frequency and location.

- *How often will you meet? Will meetings be fixed or flexible? What will be the working location. Where will you normally work? (e.g., ITU campus, study rooms, online, etc.)*

Day	Time	Location	Content
Monday	12:00–14:00	In-person (optional)	Filip, Daniel, Simon typically meet
Tuesday	12:00–16:00	Discord/In-person	Workday + Scrum at 12:00–12:30
Wednesday	12:00–14:00	In-person (optional)	–
Thursday	–	–	–
Friday	11:00–15:00	In-person at ITU	Q&A preparation at 11:00, TA-meeting at 12:30
Weekend	Flexible	–	Voluntary work

Tuesdays and Fridays are mandatory workdays, where all group members promise to be present for collaborative work. The remaining days are optional and intended for team members who prefer to work in each other's presence, so they don't have to schedule work sessions on a week-to-week basis.

All team members have agreed to dedicate approx. 16 hours per week to work on the project, which includes time spent in collaboration.

1.3 Ambition level.

- *As a group, what are your goals for this course? What level of performance are you aiming for?*

Learning impact is most important for all team members. Everyone values a high grade, but not as a compromise for learning and a positive team spirit.

In terms of the performance of our program, the team prioritizes performance over functionality – we prefer core features to perform really well, instead of many features which perform suboptimally. For this reason, we will work deliberately with refactoring code as we learn more as we go along.

1.4 Progress plan for the first two weeks.

- *What concrete steps will you take? How will you ensure that you start effectively?*

Week 1 (March 3–7) Each member of the group has identified three areas of interest within the project. By Friday (March 7), everyone will have researched their chosen areas to understand what each domain entails and what potential obstacles exist. At our Friday meeting (11:00), we will share findings and discuss how these insights affect our preferences. We expect some members to adjust their choices after hearing from the group.

In the TA session (12:30), we will seek guidance on how to develop features in parallel with minimal interdependence between domains. Following the TA session, we will assign each member a key domain based on individual interest and learning impact.

Week 2 (March 10–14) Before Tuesday (March 10, 12:00), each member will research their assigned domain and draft an execution plan. At the Scrum meeting, everyone will present their plan, share any blockers, and outline next steps. The group will then collectively refine these plans to minimize coupling between domains, so that each member can work autonomously. Tuesday will also be used to set up shared tools (GitHub, etc.).

By Friday (March 14, 11:00), each member should feel confident about how to proceed within their domain. We will use the TA session to resolve remaining uncertainties. The rest of Friday will be spent working on our domains and finalizing any adjustments to our collaborative process.

2 Part II

2.1 TA

- *What kind of help do you expect from the TA? Where would you prefer to meet (in person / online)? What types of issues should you handle internally before involving the TA?*

Regarding TA help, when the group is at a roadblock in the project, the TA will help guide the group in the right direction.

Meetings with the TA will take place in person at ITU every Friday at 12:30. The help we expect from our TA sessions will primarily focus on technical issues or problem solving involving our project. The TA will also be available for personal conflicts, but these will first be handled internally.
